

POKEMON SAN DIEGO DESIGNS

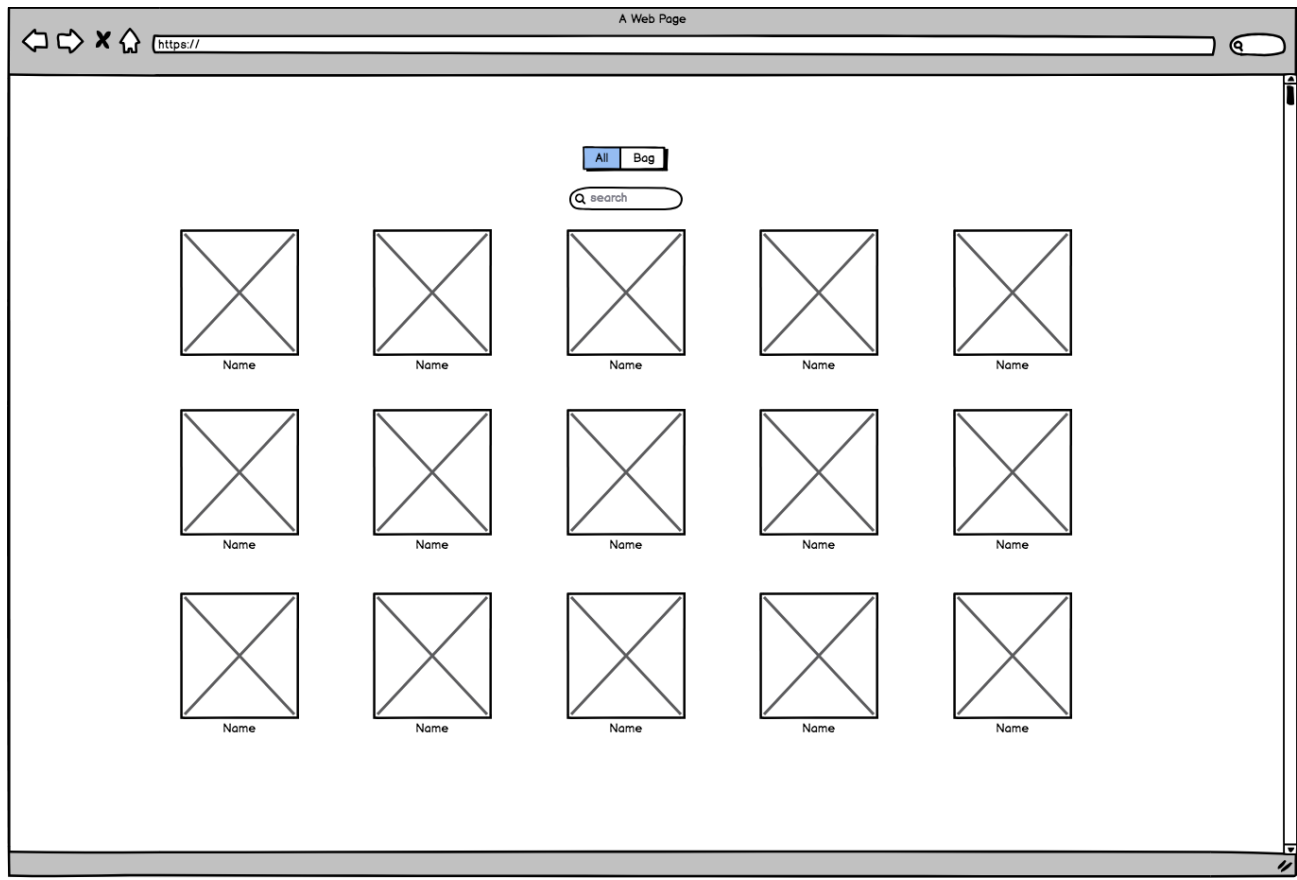

Features & Designs:

Required Features:

- The application will show more details of each Pokémon when selected by a user (as shown in the designs below)
- The application will plot the location of each Pokémon on a map based on the results of the APIS detailed above (data sources section of this document).

Main Page:

- This page will show the list of all **151 original Pokémon**.
 - Each item will show their image, and the name of the Pokémon.
 - The image URL can be found in the API.
- There will be a switch button at the top, which either shows all 151, Pokémon, or filters the Pokémon based on the users “saved” Pokémon.
 - Saved Pokémon persist in a user’s browser. (There is no concept of authentication in this application).
 - This Feature is **optional**, but at least have the UI in place.
 - Feel free to use any browser storage solution to persist this data.
- The user will also be able to use the search box to search a Pokémon by name. (There is no API for this)
- When clicking on a Pokémon it will take you to the Pokémon Detail Page (see designs below in the Pokémon Detail Page section).

Pokémon Detail Page:

- This Page will show more detail about the selected Pokémon
 - Show information about the Pokémon's Height, weight, type (all found in the API)
 - Show information about the Pokémon's description (use mock text)
- Show the Pokémon's image (found in API)
- Allows the User to toggle the setting whether or not the Pokémon is in their bag (aka Saved Pokémon).
- List out the abilities of the Pokémon (basic name of the abilities will do).
- Using Google Maps display the location of the selected Pokémon.
